

10/560673

Preliminary Amendment dated **December 14, 2005**
Application claiming priority from PCT/CH2004/000336
Attorney Docket No.: UP-341

Amendments to the Specification:

Please add the following new paragraph immediately following the title on page 1:

This application claims priority of PCT application PCT/CH2004/000336 having a priority date of June 19, 2003, the disclosure of which is hereby incorporated herein by reference.

Please replace the heading at page 1, line 3, with the following rewritten heading:

~~Technical field~~ Field of the Invention

Please replace the paragraph beginning at page 1, line 5, with the following rewritten paragraph:

The invention relates to a knitting machine ~~according to the preamble of claim 1.~~

Please replace the heading at page 1, line 7, with the following rewritten heading:

~~Prior art~~ Background of the Invention

4/9/09
COP
Please replace the paragraph beginning ^{after} at page 1, line ³⁷ 26, with the following rewritten paragraph:

US-A 4,487,039 U.S. Patent No. 4,487,039 discloses a warp knitting machine in which weft threads are supplied to two transport devices arranged at a distance from one another. For this purpose, there is a carriage which is movable to and fro between the transport devices and to which the weft threads are supplied by means of a driven delivery mechanism. The drive of the delivery mechanism to be changed continuously, taking into account the instantaneous carriage speed and carriage position, in order to adapt the tension of the weft threads to the changing speeds and positions of the carriage and to keep said tension as constant as possible. The drive is controlled via a pulse generator which is dependant on the rotation of the main shaft. An individual control of the length of the weft thread to be supplied in each case, on the one hand, and of the required length on the basis of the pattern program, on the other hand, cannot be gathered from this publication.
